Table 10. Presence of indicator diatom species in Lake Michigan, 1970-1992. The classification scheme of Tarapchak and Stoermer (1976) and Stoermer (1978) were utilized. M<sup>1</sup>=mesotrophic but intolerant of nutrient enrichment, M<sup>2</sup>=mesotrophic and tolerant of moderate nutrient enrichment, E=eutrophic. 1970-71 (offshore samples) and 1977 (nearshore samples) data are from Holland (1980) and Stoermer and Tuchman (1979) and represent data from three seasons: spring, summer and autumn. Values in the columns M<sup>1</sup>, M<sup>2</sup> and E represent April to November values in 1970-71 and 1977. From 1983-92, only spring and summer values are used. All occurrences of organisms are considered.

Date	M <sup>1</sup>	M <sup>2</sup>	E	M <sup>1</sup> +M <sup>2</sup> /E
1977 (Nearshore)	8	6	12	1.2
1970-71 <sup>1</sup>	6	3	5	1.8
1983	9	6	8	1.9
1984	9	7	12	1.3
